

The FORDLOC End Cap System starts with a special key lock seat.

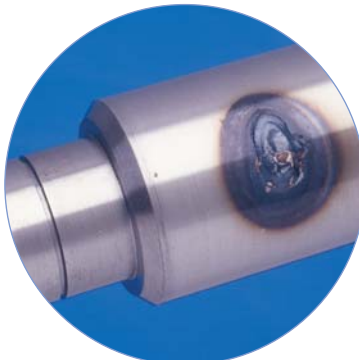

The patented steel key lock is inserted and positioned for assembly.

The end cap is installed over the key lock.

The positioned end cap is locked in final position with a set screw.

The complete assembly is deep penetration welded to lock the end cap in position.

Finally, the weld is ground and polished to the working diameter.

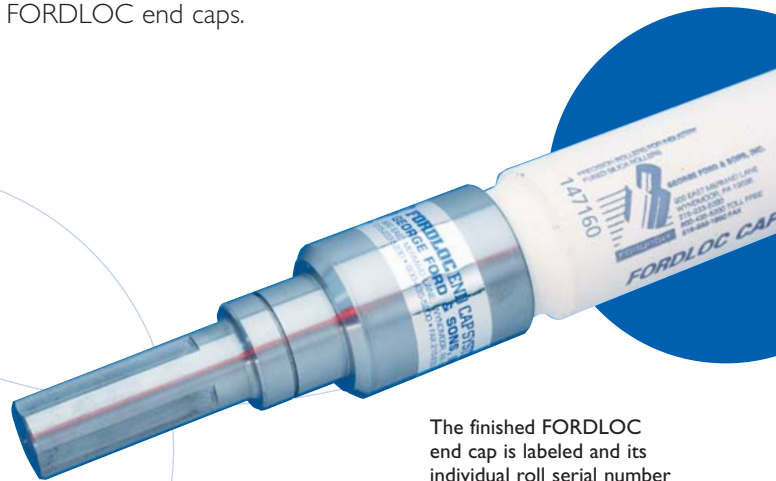

# MAKE BETTER GLASS

## THE EXCLUSIVE FORDLOC TEMPERING ROLLER END CAP SYSTEM

True-running tempering rollers are critical to production of wave-free glass. Even a properly concentric roller becomes useless if the end caps loosen. Production comes to a halt and income is lost while a repair is made or roller changed.

The **patented FORDLOC End Cap System** solves the problem. The exclusive design locks the end cap in place, with a steel "key lock." It's guaranteed—in writing—not to come loose for the life of the roller. There's minimum lost time and lost profits. Furthermore, each FORDLOC end cap is labeled and registered with an individual serial number, so you can track each roller's usage.

Whether you are purchasing replacement rollers, specifying the rollers for a new oven, or having your rollers restored, be certain that they are equipped with the lifetime **FORDLOC End Cap System**. It's a George Ford & Sons exclusive. Contact George Ford & Sons for more information or a quote on the exclusive FORDLOC end caps.

The finished FORDLOC end cap is labeled and its individual roll serial number is registered.
